Roofing

Roofs are an integral asset to every building and proper roof management is essential in ensuring a cost effective and aesthetically pleasing life cycle.

Challenges

The roof of any building has to protect against the elements and keep warmth inside the property.

Lack of maintenance, damage from wind, rain and frost, UV deterioration, guttering and ventilation issues or just poor quality installation will all lead to problems.

Whether a new build, replacement or simple repair work, it is essential to choose a company that offers experience and expertise.

Solutions

FMC remain at the forefront of the latest roofing applications and provide expertise and technical support from implementation to completion of the project.

Our team of specialists undertake all aspects of roofing from small patch repairs to large scale commercial blocks and ensure affordable and durable solutions specific to the building's requirements.

We work in partnership with leading UK and European manufacturers offering guarantees up to 25 years and deliver successful roofing projects to the commercial, industrial, public and healthcare sectors throughout the UK.

Bituminous Felt

Perhaps the most widely used system for watertight flat and sloping roofs on both new build and refurbishment projects, Bituminous Felt is heavy duty, robust and extremely tough.

FMC supply high quality, cost effective bitumen flat roofing systems suitable for a wide range of surfaces, including metal decking, timber and concrete substrates.

The reinforced three layer insulated membrane is resistant to impact and tearing, whilst being flexible to climatic extremes and structural movement giving complete peace of mind over a 40 year life expectancy.

Cold Applied Liquid Systems

Liquid Resin is very popular due to the flexibility of the product and flame free work conducted on site.

Liquid resin can be applied straight over old asphalt, felt, concrete, asbestos, wood and metal and is ideal for patch repair, balconies, walkways and difficult detailing around penetrations.

With seamless, fast installation and minimal disruption, Liquid Resin is fast becoming the professional choice for all hot and cold roof designs.

Single Ply

Single Ply roofing membranes are very versatile and ideal for almost any kind of roofing project from new extensions, to replacement or refurbishment of existing roof coverings, bay windows and garages.

With a proven track record and boasting a number of unique qualities, single ply is a popular design choice for many specifiers.

Mastic Asphalt

Keeping balconies and walkways completely waterproof is essential in preserving and protecting the materials that they are constructed from. Any moisture penetration will cause structural defects to the surface and supports regardless of the materials used and will also become a safety hazard.

Mastic asphalt has kept pace with today's technology. Its advanced polymer formulation makes it the perfect choice for any roofing, balcony or walkway application.

One of the key advantages of mastic asphalt, particularly for larger projects, is that it can be laid at speed. The material can be delivered to site, direct from the factory, at the correct temperature for instant installation allowing other trades on site, often within hours.

Sustainable

Green roofs are rooftops covered with a layer of vegetation and are getting a lot of credit for providing environmental benefits.

They reduce storm water runoff from buildings, conserve energy by moderating rooftop temperatures, restore fragile ecosystems and enhance urban spaces.

Because the waterproofing membrane is fully protected against UV, physical damage and temperature changes, its lifespan is increased lowering maintenance and renovation costs.

Pitched Tile & Slate

FMC undertake a variety of slating and tiling projects for commercial and domestic roofs, ranging from small repairs and re-roofs to small extensions or full housing projects.

Working with leading manufacturers including Redland, Marley, Sandtoft, Forticrete and Dreadnought we supply and install natural or man made tiles and slates to suit the specific needs of a project.

Leadwork

FMC qualified roofing experts carry out all works from small lead repairs, to complete renewal of lead valleys, flat roofs, abutments and gullies.

We also carry out specialist work including the renewal of lead copulas and all aspects of decorative lead works.

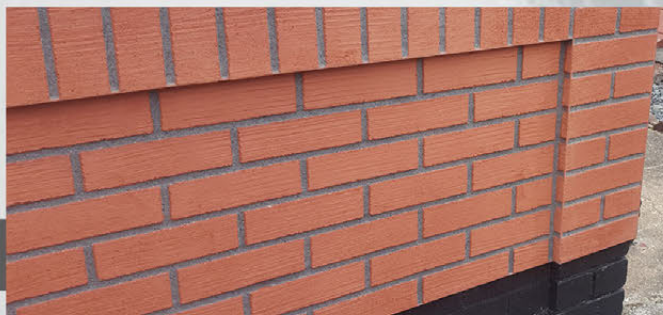

Guttering

We clean and repair gutters and fascias for domestic and commercial buildings throughout the home Counties, London & South East.

Our team is trained to the highest standard and all our work is carried out efficiently and professionally

Brickwork

FMC provide professional bricklayers and builders, covering the full range of building works including new build properties, extensions, conversions, boundary walls and decorative brickwork.

Rendering

We are experts in exterior wall rendering, both for houses and for larger projects.

We offer all types of rendering, including lime render, acrylic renders, sand and cement mortar render and the latest in through-coloured rendering.

Pointing

Freezing moisture will cause brickwork to deteriorate in a brick exterior wall and repair and remedial works are necessary as a point of urgency, to stop further deterioration and to repair the face of the brick.
