build

FMC Ground Support service is often the first and last on site. From excavation and foundations, through to the floor and damp proof course, drainage and pipework. At the end of the project, we will return to put in driveways and footpaths.

Earthworks

FMC carry out bulk earthmoving and removal of material, offering special rates for recyclable hardcore and concrete, with access to a nationwide network of licensed disposal facilities for inert and contaminated material.

Groundworks

Working with highly respected specialist subcontractors we carry out groundworks within all sectors of construction including education, housing, leisure, commercial and healthcare.

Surfacing

We provide traditional surfaces such as asphalt, tarmac, spray, shingle and gravel for domestic, commercial and industrial applications.

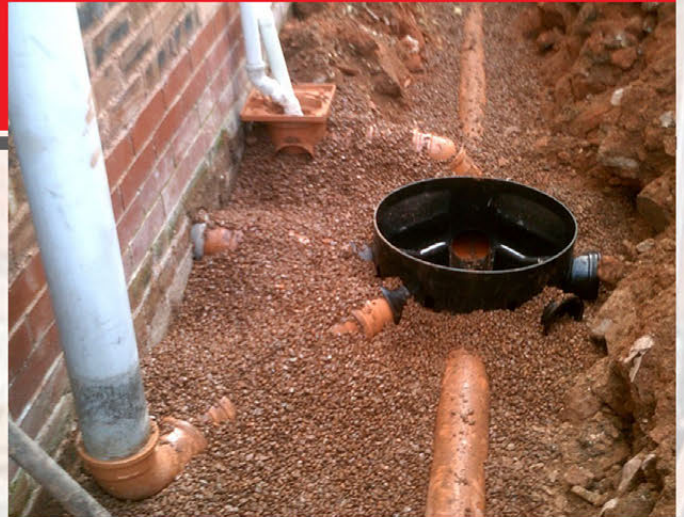

Our surfacing services include foundations, footings, concrete floor slabs, beam & block flooring, hard standings, concreting, car parks and kerbs.

Drainage

Our Engineers meet current Health & Safety regulations and are trained to work within confined spaces and the public highway.

We install all types of drainage systems to treat domestic and commercial sewage, including septic tanks, sewage treatment plants, cesspools, rainwater harvesting tanks and soakaway systems.

Underpinning

We offer full underpinning contracting services ranging from traditional underpinning to cutting edge techniques to arrest movement in structures suffering from subsidence, to enhance existing foundations where an increase in load bearing capacity is required, or to deepen existing foundations to facilitate reductions in ground levels.

Paving

Clearance

As part of our Ground Support operation, we offer clients site clearance services, either as a stand-alone project or part of a package.

Before any building or landscaping work, it is important the area is cleared correctly and left tidy. Site clearance would include the removal of waste, old foundations, tree stumps, root balls and hardcore.
